

Calibration development

Pre-conditions:

SensoLogic evaluates your spectra and reference data by using the SL Calibration Workshop for developing optimized chemometric calibrations.

Procedure:

- a) Inspection and qualitative evaluation of NIR spectra by using your PCA scores
- b) Analysis of the distribution of property values with the aid of the property histogram
- c) Calculation of PLSR- and MLR-models, if necessary in consideration of data pre-treatments, outlier detection and handling, wavelength optimization
- d) Documentation of the results by means of commented calibration protocols and other printouts

Price:

Hourly rate for calibration development: EUR 82,- plus VAT

Calibration support

If desired we also offer long term support of your calibrations.
