

SensoLogic Technical Publishing

Technical Documentation is pure communication. If you are responsible for developing user documents in your company, your experience tells you that successful communication is vital – not only with users. If clear and concise user documentation is the goal, everyone involved in the process of creating it must work together without friction.

This is why, at SensoLogic Technical Publishing, our particular emphasis is on excellent coordination and close integration into your company's editorial processes. As your partner, we offer a wide range of services with the single aim of presenting technical information in ways that are clearly structured and easy to understand.

- User manuals and online help for instruments and technical software
- Multilingual documents and terminology management
- Website and interface design for better usability

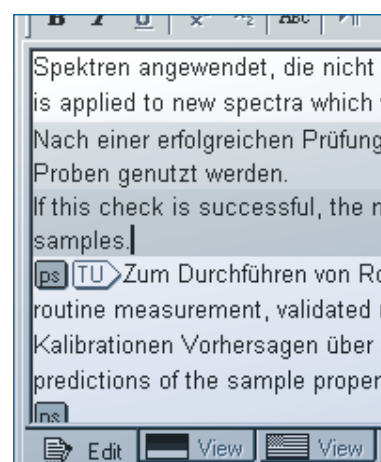

User Manuals and Online Help

- Concept development in close cooperation with your development and marketing departments
- Integration into your editorial processes with professional publishing tools (e.g. FrameMaker and Acrobat)
- Context-sensitive online help and single-source publishing for various platforms and help formats

Multilingual Documents and Terminology

- Multilingual documentation and translation into the major world languages (TRADOS)
- Terminology management and maintenance ensures consistent terminology throughout the documentation.
- An individual translation database is established and updated with the help of software-supported terminology extraction.

Website and Interface Design for Better Usability

- Practical user tests, usability concepts and consulting to enhance the usability of user interfaces and products
- Website concepts and design according to approved principles of cognitive psychology
- Compact database solutions based on PHP and MySQL for flexible, individual website content that is easy to update
